<i>Remarks</i>	Replaces World Geodetic System 1984 (G1674) and used in broadcast and precise ephemerides from 2013-10-16. The reference frame was redesignated WGS 84 (G1762') after coordinates of 7 NGA tracking stations were changed following station moves and antenna updates between 2014-08 and 2015-06. Replaced by WGS 84 (G2139) from 2021-01-03.	
<i>Anchor definition</i>	Defined through coordinates of 19 GPS tracking stations adjusted to a subset of IGB08 stations at epoch 2005.0 using observations made in May 2013. The IGB08 station coordinates are considered to be equivalent to ITRF2008.

<i>Remarks</i>	The World Geodetic System 1984 (WGS 84) contains four defining physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant ($GM = 3.986004418 \times 10^{14} \text{ m}^3/\text{s}^2$) includes the mass of the atmosphere, and the Earth's angular rotational velocity about its spin axis ($\omega = 7.2921150 \times 10^{-5} \text{ rad/s}$).
<i>Semi-major axis</i>	6378137.0 m
