| <i>Remarks</i>                    | The ETRF92 reference frame is a realisation of the ETRS89 reference system.  |  |
| <i>Anchor definition</i>          | Coincides with ITRF92 in orientation and scale at epoch 1989.0 realigned to ITRF89 at epoch 1989.0 using 3 translations and is fixed to the stable part of the Eurasian tectonic plate through 3 rotation rates derived from the NNR-NUVEL-1 geophysical model, representing the Eurasian plate's angular velocity about its Euler pole. |  |
| <i>Coordinate Reference Epoch</i> | 1989.0   |  |
| <i>Scope</i>                      | Spatial referencing  |  |
| <i>Ellipsoid</i>                  | GRS 1980   |  |
| <i>Prime Meridian</i>             | Greenwich  |  |

| <i>Remarks</i>              | Adopted by IUGG 1979 Canberra. Inverse flattening is derived from geocentric gravitational constant $GM = 3986005e8 \text{ m}^3/\text{s}^2$ , dynamic form factor $J_2 = 108263e-8$ and Earth's angular velocity = $7292115e-11 \text{ rad/s}$ .   |              |                                |               |           |                  |                                      |                         |         |                            |                     |                             |                  |             |         |
