<i>Remarks</i>	Grid transformation from NAD83(CSRs) v4 ellipsoidal heights at epoch 2002.0 to CGVD28 normal orthometric heights. Derived from the NAD83(CSRs) v3 to CGVD28 transformation by applying the NAD83(CSRs) v7 velocity model to incorporate the propagation of heights from epoch 1997.0 to 2002.0. Bi-linear interpolation of the grid file will give results agreeing to within 1cm 99.97% of the time.	
<i>Operation version</i>	v1

<i>Remarks</i>	For consistency with earlier geoid models in Canada, reference software for CGG2013 and CGG2013a uses bi-quadratic interpolation over nine grid nodes. The bi-linear interpolation is sufficient for most uses as the newer models have a higher spatial resolution. See information source for file format documentation.
