| <i>Item class</i> | OperationMethod |
| <i>Name</i> | Geographic3D to Gravity Related Height (KNGeoid14) |
| <i>Item status</i> | VALID |
| <i>Identifier</i> | 1001 |
| <i>Data source</i> | ISO Geodetic Registry |
| <i>Remarks</i> | A vertical transformation model between KGD2002 ellipsoid height and KVD1964 normal orthometric height. This transformation model is a hybrid geoid model covering the territory of the Republic of Korea. This model provides separation values on a regular grid of latitude and longitude intersection points. Replaced by KNGeoid18. |
