<i>Remarks</i>	Adopted by the Canadian federal government for Canada, and by provincial governments in Manitoba, Newfoundland and Labrador, Nova Scotia, Ontario, and Prince Edward Island. Replaces NAD83(CSRS) v5. Replaced by NAD83(CSRS) v7.	
<i>Anchor definition</i>	Realization of the North American Datum of 1983 for the Canadian Spatial Reference System, referred to as CSRS98 or CSRS. The	

	frame is defined by a time-dependent seven parameter transformation of ITRF2008 3D geocentric Cartesian coordinates and velocities for Canadian and bordering US and Greenland areas at reference epoch 2010.0. The frame is kept aligned to North America at other epochs using the NNR-NUVEL-1A estimate of three Cartesian rotation rates of change representing the tectonic plate motion of North America. The origin, scale and orientation of the frame are nominally defined to be that for the BIH Terrestrial System 1984 (BTS84).
