

ISO Geodetic Registry

<i>Item class</i>	GeodeticDatum	
<i>Name</i>	North American Datum of 1983 (High Accuracy Regional Network)	
<i>Item status</i>	VALID	
<i>Identifier</i>	119	
<i>Alias</i>	NAD83(HARN)	
<i>Alias</i>	NAD83(HPGN)	
<i>Alias</i>	NAD83	
<i>Alias</i>	NAD83 (High Precision Geodetic Network)	
<i>Alias</i>	Guam Geodetic Network 1993	
<i>Information source</i>	<i>Title</i>	Notice to Adopt Standard Method for Horizontal Datum Transformation
	<i>Author</i>	US Government
	<i>Publisher</i>	Office of Federal Register, NARA
	<i>Publication date</i>	1990-08-10
	<i>Edition date</i>	1990-08-10
	<i>Series/Journal name</i>	Federal Register Notice
	<i>Issue identification</i>	Volume 55, No. 155, Document: 00-18809
	<i>Page</i>	32681.0
	<i>Other citation details</i>	Mandates use of NADCON for official transformations between datums
	<i>Title</i>	NADCON 5.0: Geometric Transformation Tool for points in the National Spatial Reference System
<i>Information source</i>	<i>Author</i>	D. Smith, A. Bilich
	<i>Publisher</i>	NOAA's National Geodetic Survey
	<i>Publication date</i>	2017-03-27
	<i>Edition date</i>	2017-03-27
	<i>Series/Journal name</i>	NGS Technical Report
	<i>Other citation details</i>	Replaces version 4.2 and all earlier. Provides gridding algorithm, datum transformations, and extents of covnversion grids.
<i>Data source</i>	ISO Geodetic Registry	
<i>Remarks</i>	Replaces NAD83 (1986). It was replaced by the NAD83 (FBN) in CONUS, American Samoa, Guam, and CNMI (Rota, Tinian, and Saipan). It was replaced by a corrected NAD83 (HARN) in Puerto Rico and the U.S. Virgin Islands.	
<i>Anchor definition</i>	A realization of NAD83. The original state-wide HARN's were realized from an adjustment of data observed in the NAD83 (1986) reference frame to develop a set of passive geodetic control values. This was accomplished at various times in the early 1990's through 1997. The original HARN's were latitude and longitude only. A subsequent realization from GPS observations was made to develop new latitude, longitude, and ellipsoid heights. If the latitude and longitudes were less than 2 cm different, then the original values were retained and the ellipsoid heights simply added as a third coordinate. If the latitude or longitude changed by more than 2 cm, then all three coordinates were updated. This latter case forms the basis for the Federal Base Network (FBN), which is treated separately from the HARN's.	
<i>Scope</i>	Spatial referencing	
<i>Ellipsoid</i>	GRS 1980	
<i>Prime Meridian</i>	Greenwich	

Extent

<i>Description</i>	United States and Territories - onshore and offshore: American Samoa. United States (USA) – Alaska, CONUS (Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming), Hawaii. Virgin Islands (US).

<i>Remarks</i>	Adopted by IUGG 1979 Canberra. Inverse flattening is derived from geocentric gravitational constant $GM = 3986005e8 \text{ m}^3/\text{s}^2$, dynamic form factor $J_2 = 108263e-8$ and Earth's angular velocity = $7292115e-11 \text{ rad/s}$.														
<i>Semi-major axis</i>	6378137.0 m														
<i>Inverse flattening</i>	298.257222101 m
