<i>Data source</i>	ISO Geodetic Registry	
<i>Remarks</i>	Replaces NAD83 (CORS96) Epoch 1997.0. Replaced by NAD83(2011), NAD83 (MA11) and NAD83 (PA11) from 2011-09-06.	
<i>Anchor definition</i>	Realization of the NAD83. The frame is defined by a time-dependent seven parameter transformation of ITRF2000 3D geocentric Cartesian coordinates and velocities at reference epoch 2002.0. The frame is kept aligned to North America at other epochs using the NNR-NUVEL-1A estimate of three Cartesian rotation rates of change representing the tectonic plate motion of North America. The origin, scale and orientation of the frame are nominally defined to be that for the BIH Terrestrial System 1984 (BTS84). Passive control network from NAD83 (2007) was a densification of the NAD83 (CORS96) Epoch 2002 for the active control network, but that they are functionally equivalent.	
<i>Release date</i>	2002	
<i>Coordinate Reference Epoch</i>	2002.0	
<i>Scope</i>	Spatial referencing	
<i>Ellipsoid</i>	GRS 1980	
<i>Prime Meridian</i>	Greenwich

<i>Remarks</i>	Adopted by IUGG 1979 Canberra. Inverse flattening is derived from geocentric gravitational constant $GM = 3986005e8 \text{ m}^3/\text{s}^2$, dynamic form factor $J_2 = 108263e-8$ and Earth's angular velocity = $7292115e-11 \text{ rad/s}$.
