Item class	GeodeticCRS	
Name	WGS 84 (G1762) - LatLon	
Item status	VALID	•
Identifier	265	
Information source	Issue identification	e Standardization Document NGA.STND.0036_1.0.0_WGS84
Data source	ISO Geodetic Registry	
Remarks	Replaces WGS 84 (G1674) - LatLon.	
Scope	Spatial Referencing and GPS satellite navigation.	
Datum	World Geodetic System 1984 (G1762)	
Coordinate System	Ellipsoidal 2D CS. Axes: latitude, longitude. Orientations: north, east. UoM: degree	

Extent

Description	World.	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Item class GeodeticDatum

Name World Geodetic System 1984 (G1762)

Data source ISO Geodetic Registry

Remarks Replaces World Geodetic System 1984 (G1674) and used in broadcast

and precise ephemerides from 2013-10-16. The reference frame was redesignated WGS 84 (G1762') after coordinates of 7 NGA tracking stations were changed following station moves and antenna updates between 2014-08 and 2015-06. Replaced by WGS 84 (G2139) from

2021-01-03.

Anchor definition Defined through coordinates of 19 GPS tracking stations adjusted to

a subset of IGb08 stations at epoch 2005.0 using observations made in May 2013. The IGb08 station coordinates are considered to be

equivalent to ITRF2008.

Release date 2013-10-16 Coordinate Reference Epoch 2005.0

Scope Spatial Referencing and GPS satellite navigation

Ellipsoid WGS 84
Prime Meridian Greenwich

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m

Remarks Used in geographic 2D coordinate reference systems. Coordinates

referenced to this CS are in degrees. Any degree representation (e.g. DMSH, decimal, etc.) may be used but that used must be declared for

the user by the supplier of data.
