## ISO Geodetic Registry

Item class GeodeticDatum

North American Datum of 1983 (MA11) Epoch

2010

Item status VALID Identifier 101

Alias NAD83(MA11)

Information source Title Notice to Adopt Standard Method for Horizontal

**Datum Transformation** 

Author US Government

Publisher Office of Federal Register, NARA

Publication date 1990-08-10 Edition date 1990-08-10

Series/Journal name Federal Register Notice

Issue identification Volume 55, No. 155, Document: 00-18809

Page 32681.0

Other citation details Mandates use of NADCON for official

transformations between datums

Information source Title CORS Coordinates

Author National Geodetic Survey

Publisher National Oceanic and Atmospheric Administration

(NOAA) National Geodetic Survey (NGS)

Revision date 2017-05-16

Series/Journal name NGS Online listing of transformation parameters

Other citation details webpage

Information source Title NADCON 5.0: Geometric Transformation Tool for

points in the National Spatial Reference System

Author D. Smith, A. Bilich

Publisher NOAA's National Geodetic Survey

Publication date 2017-03-27 Edition date 2017-03-27

Series/Journal name NGS Technical Report

Other citation details Replaces version 4.2 and all earlier. Provides

gridding algorithm, datum transformations, and

extents of covnversion grids.

Information source Title Publication of North American Datum of 1983

(2011) Epoch 2010.00, North American Datum of 1983 (PA2011) Epoch 2010.00 and North American Datum of 1983 (MA2011) Epoch

2010.00

Author US Government

Publisher Office of Federal Register, NARA

Publication date 2013-08-08 Edition date 2013-08-08

Series/Journal name Federal Register Notice

Issue identification Volume 78, No. 153, Document: 2013–19167,

Citation: 78 FR 48421

Remarks Replaces NAD83(MARP00) for control determined in an active

reference frame and NAD83 (FBN) for passive control.

Anchor definition Realization of NAD83. The frame is defined by a seven parameter

transformation of ITRF2008 3D geocentric Cartesian coordinates and velocities for the Guam and the Commonwealth of the Northern Mariana Islands (CNMI) at reference epoch 2010.0. The frame is kept aligned to the Mariana tectonic plate using an Euler pole rotation. The origin, scale and orientation of the frame are nominally defined

to be that for the BIH Terrestrial System 1984 (BTS84). This also is a realization of passive control constrained to the values at the CORS. NAD83(20110 serves as a connection between passive network transformed by grids and active frames defined by time-dependent

transformations.

Release date 2013
Coordinate Reference Epoch 2010.0

Scope Spatial referencing

Ellipsoid GRS 1980
Prime Meridian Greenwich

## Extent

Description	Guam - onshore and offshore. Northern Mariana Islands - onshore and offshore. Palau - onshore and offshore.	
Geographic Bounding Box	West-bound longitude	129.48
	North-bound latitude	23.9
	East-bound longitude	149.55
	South-bound latitude	1.64

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m\*m\*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

Semi-major axis 6378137.0 m
Inverse flattening 298.257222101 m
