## **ISO Geodetic Registry**

Item class GeodeticDatum

Name World Geodetic System 1984 (G2139)

Item status VALID
Identifier 795

Alias WGS 84 (G2139)

Information source Title Recent Update to WGS 84 Reference Frame and

NGA Transition to IGS ANTEX

Author Office of Geomatics / GNSS Division, National

Geospatial-Intelligence Agency

Publisher National Geospatial-Intelligence Agency

Publication date 2021

Series/Journal name Public Release

Issue identification 21-520

Publisher National Geospatial-Intelligence Agency

Publication date 2021-10-25

Series/Journal name ISOGR Control Body Meeting

Issue identification 2021-10-25

Data source ISO Geodetic Registry

Remarks From 2021-01-03 replaces World Geodetic System 1984 (G1762),

which has been redesignated World Geodetic System 1984 (G1762'). Tracking station coordinates changed on 2021-03-28 when NGA implemented the IGS definition of GPS satellite antenna phase centre

offsets.

Anchor definition Defined through coordinates of 19 GPS tracking stations aligned

to a subset of IGb14 stations at epoch 2016.0. The IGb14 station

coordinates are considered to be equivalent to ITRF2014.

Release date 2021-01-03

Coordinate Reference Epoch 2016.0

Scope Spatial referencing and GPS satellite navigation

Ellipsoid WGS 84
Prime Meridian Greenwich

## Extent

Description	World	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m
