Release date

Remarks Replaces World Geodetic System 1984 (G730) from 1997-01-29.

Replaced by World Geodetic System 1984 (G1150) from 2002-01-20. Used in broadcast ephemeris from 1997-01-29 to 2002-01-19 and in

precise ephemeris from 1996-09-29 to 2002-01-19.

Anchor definition Defined through coordinates of 13 GPS tracking stations adjusted to

a subset of ITRF94 stations at epoch 1997.0. The reference epoch for the adjustment was 1994.0 and the station coordinates were propagated to 1997.0 using the NNR-NUVEL-1A plate motion model.

1997-01-29

Coordinate Reference Epoch 1997.0

Scope Spatial Referencing and GPS satellite navigation

Ellipsoid WGS 84
Prime Meridian Greenwich

Data source ISO Geodetic Registry

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m<sup>3</sup>/s<sup>2</sup>) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m
