gridding algorithm, datum transformations, and

extents of covnversion grids.

Data source ISO Geodetic Registry
Scope Spatial referencing

Datum North American Datum of 1983 (PA11) Epoch 2010

Coordinate System Ellipsoidal 3D CS. Axes: latitude, longitude, ellipsoidal height.

Orientations: north, east, up. UoM: degree, degree, metre.

### Extent

Description	American Samoa - onshore and offshore.  Marshall Islands - onshore and offshore. United States (USA) - onshore and offshore - Hawaii.  United States Minor Outlying Islands - onshore and offshore.	
Geographic Bounding Box	West-bound longitude	157.47
	North-bound latitude	31.8
	East-bound longitude	-151.27
	South-bound latitude	-17.56

Remarks Replaces NAD83(PACP00) for control determined in an active

reference frame for Hawaii, American Samoa and outlying U.S.

islands. For passive control, NAD83 (PA11) replaces NAD83 (FBN) for

American Samoa and NAD83 (HARN) for Hawaii.

Anchor definition Realization of NAD83. The frame is defined by a seven parameter

transformation of ITRF2008 3D geocentric Cartesian coordinates and velocities for Hawaii, American Samoa and other Pacific islands at reference epoch 2010.0. The frame is kept aligned to the Pacific tectonic plate using an Euler pole rotation. The origin, scale and orientation of the frame are nominally defined to be that for the BIH Terrestrial System 1984 (BTS84). This also is a realization of passive control constrained to the values at the CORS. NAD83(20110 serves as a connection between passive network transformed by grids and

active frames defined by time-dependent transformations.

Release date 2013
Coordinate Reference Epoch 2010.0

Remarks Used in geographic 3D coordinate reference systems. Horizontal

coordinates referenced to this CS are in degrees. Any degree representation (e.g. DMSH, decimal, etc.) may be used but that used

epresentation (e.g. Divisin, decimal, etc.) may be used but t

must be declared for the user.
