Publication date 2003

Edition date

Series/Journal name Technical Report

Issue identification TR8350.2

Data source ISO Geodetic Registry

Remarks Replaces WGS 84 (G873) - LatLon. Replaced by WGS 84 (G1674) -

LatLon.

Scope Spatial Referencing and GPS satellite navigation.

Datum World Geodetic System 1984 (G1150)

Coordinate System Ellipsoidal 2D CS. Axes: latitude, longitude. Orientations: north, east.

UoM: degree

#### Extent

Description	World.	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Item class GeodeticDatum

Remarks Replaces World Geodetic System 1984 (G873) from 2002-01-20.

Replaced by World Geodetic System 1984 (G1674) from 2012-02-08. Used in broadcast ephemeris from 2002-01-20 to 2012-02-07 and in

precise ephemeris from 2002-01-20 to 2012-05-06.

Anchor definition Defined through coordinates of 17 GPS tracking stations adjusted to a

subset of 49 IGS stations. Observations made in February 2001. The reference epoch for ITRF2000 is 1997.0; the station coordinates were

propagated to 2001.0 using IERS station velocities.

Release date 2002-01-20
Coordinate Reference Epoch 2001.0

Scope Spatial Referencing and GPS satellite navigation

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

6378137.0 m

Inverse flattening 298.2572236 m

Semi-major axis
