Scope Spatial referencing

Datum SIRGAS Continuously Operating Network SIR13P01

Coordinate System Geocentric 3D right-handed Cartesian CS. Axes: Geocentric X,Y,Z.

Orientation: Z to North Pole, [X and Y in the equatorial plane, X at Prime Meridian | X in the equatorial plane at the Prime Meridian]. UoM:

m.

Extent

South America - onshore and offshore. Central America - onshore and offshore. Mexico - onshore and offshore.

Geographic Bounding Box West-bound longitude -122.19

| North-bound latitude | 32.72 |
|----------------------|--------|
| East-bound longitude | -25.28 |
| South-bound latitude | -59.87 |

Remarks Replaces SIR11P01. Replaced by SIR14P01. First multi-year solution

after the El Maule earthquake of February 2010.

Anchor definition Realized by a frame of 108 continuously operating stations using GPS

observations from April 2010 to June 2013 and aligned to IGb08 at epoch 2012.0. Weekly normal equations from April 2010 to April 2011 were reprocessed using the second reprocessing campaign products (IG2) of the International GNSS Service and absolute phase centre calibrations referring to the IGS08 reference frame. Velocity model VEMOS2009 used to propagate coordinates from an arbitrary epoch to

the 2012.0 reference epoch.

Release date 2013 Coordinate Reference Epoch 2012.0

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m*m*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

Semi-major axis 6378137.0 m
Inverse flattening 298.257222101 m
