Item class GeodeticCRS

NAD 83 (FBN) - LatLonEHt

Item status VALID
Identifier 412

Alias North American Datum of 1983 (FBN)

Information source Title NADCON 5.0: Geometric Transformation Tool for

points in the National Spatial Reference System

Author D. Smith, A. Bilich

Publisher NOAA's National Geodetic Survey

Publication date 2017-03-27 Edition date 2017-03-27

Series/Journal name NGS Technical Report

Other citation details Replaces version 4.2 and all earlier. Provides

gridding algorithm, datum transformations, and

extents of covnversion grids.

Information source Title Notice to Adopt Standard Method for Horizontal

Datum Transformation

Author US Government

Publisher Office of Federal Register, NARA

Publication date 1990-08-10 Edition date 1990-08-10

Series/Journal name Federal Register Notice

Issue identification Volume 55, No. 155, Document: 00-18809

Page 32681.0

Other citation details Mandates use of NADCON for official

transformations between datums

Data source ISO Geodetic Registry
Scope Spatial referencing

Datum North American Datum of 1983 (Federal Base Network)

Coordinate System Ellipsoidal 3D CS. Axes: latitude, longitude, ellipsoidal height.

Orientations: north, east, up. UoM: degree, degree, metre.

Extent

Description	United States and Territories - onshore and offshore: American Samoa. Guam. Northern Mariana Islands. Puerto Rico. United States (USA) - CONUS (California, Connecticut, Florida, Idaho, Maine, Massachusetts, Montana, Nevada, New Hampshire, New Jersey, New York, North Carolina, Oregon, Rhode Island, South Carolina, Tennessee, Vermont,				
			Washington, Wisconsin). Virgin Islands (US).	
			Geographic Bounding Box	West-bound longitude	144.58
				North-bound latitude	49.38
				East-bound longitude	-64.51
	South-bound latitude	-17.56			

Item class GeodeticDatum

extents of covnversion grids.

Data source ISO Geodetic Registry

Remarks Replaces NAD83 (HARN) in 19 states as wellas outlying territories.

See Geographic extents for list. Adopted at different times in the 18 affected states, but adopted in 2002 for outlying territories. Replaced by

NAD83 (2007).

Anchor definition This a realization of NAD83. This datum is closely intertwined with

NAD83 (HARN). HARN's were realized first as latitude and longitude only realizations in statewide adjustments. A subsequent campaign adjusted newer GPS coordinates to derive updated latitude, longitude and ellipsoid height. If the latitude and longitude values were within 2 cm, the ellipsoid height was added as a third coordinate only. If the latitude or longitude differed by more than 2 cm, then all three coordinates were replaced and the resulting statewide realization was called an FBN. This occurred in 18 states as defined by the geographic extent. A null transformation was used for the remaining state HARN's.
