ISO Geodetic Registry

Item class Transformation

Name ITRF96 to ITRF2014 [LINZ v1]

Item statusVALIDIdentifier651

Information source Title Transforming between ITRF and NZGD2000

Author Land Information New Zealand Publisher Land Information New Zealand

Publication date 2017-05-09

Data source ISO Geodetic Registry

Remarks Typically used as the second step in a two-step process to transform

coordinates from NZGD2000 to ITRF2014. The first step is to transform coordinates from NZGD2000, which is aligned to ITRF96 at epoch 2000.0, to ITRF96 at the specified epoch using the latest version of that transformation. The ITRF96 coordinate at the specified epoch is then transformed to ITRF2014 at the same epoch using this transformation.

Operation version LINZ v1

Scope Spatial referencing.

Operation accuracy 0.001 m

Source CRS ITRF96 - XYZ

Target CRS ITRF2014 - XYZ

Operation method Time-Dependent Position Vector Transformation (geocentric Cartesian

domain)

Extent

New Zealand - onshore and offshore Antipodes Islands, Auckland Islands, Bounty
Islands, Campbell Island Chatham Islands,
Kermadec Islands, North Island, Raoul Island,
Snares Islands, South Island, Stewart Island.

Geographic Bounding Box

West-bound longitude
North-bound latitude
160.0
North-bound latitude
-25.0

East-bound longitude -25.0
South-bound latitude -60.0

Operation parameter values

X-axis translation-6.4 millimetreY-axis translation-3.99 millimetreZ-axis translation14.27 millimetre

Item class OperationMethod

Name Time-Dependent Position Vector

Transformation (geocentric Cartesian domain)

Item status VALID Identifier 82

Alias Time-Dependent 7-Parameter Transformation

Alias 14-Parameter Transformation

Alias Time-Dependent Position Vector Transformation

Data source ISO Geodetic Registry

Remarks Note the analogy with the rotation for the Time-dependent Coordinate

Frame Transformation but beware of the differences! The Position

Vector Transformation convention is used by IAG.
