	Issue identification	1.0	
Data source	ISO Geodetic Registr	у	

Remarks	The distinction in usage between ETRF89 and ETRS89 is confused: although in principle conceptually different in practice both are used as synonyms.
Scope	Spatial referencing
Datum	European Terrestrial Reference Frame 1989
Coordinate System	Geocentric 3D right-handed Cartesian CS. Axes: Geocentric X,Y,Z. Orientation: Z to North Pole, [X and Y in the equatorial plane, X at Prime Meridian X in the equatorial plane at the Prime Meridian]. UoM: m.

Extent

Description	Europe - onshore and offshore: Albania,		
	Andorra, Austria, Belgium, Bosnia and		
	Herzegovina, Bulgaria, Croatia, Cyprus,		
	Czech Republic, Denmark, Estonia, Faroe Islands, Finland, France, Germany, Gibraltar, Greece, Hungary, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malta, Monaco, Montenegro, Netherlands, Norway including Svalbard and Jan Mayen, Poland, Portugal, Romania, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom (UK)		
	including Channel Islands and Isle of Man,		
	Vatican City State.		
Geographic Bounding Box	West-bound longitude	-16.1	
	North-bound latitude	84.17	
	East-bound longitude South-bound latitude	39.65 32.88	
	Codii Dodiia lalitado	02.00

Remarks ETRS89 is the reference system and ETRF89 is its first realization.

Unfortunately the two terms have been used synonymously, which has caused some confusion amongst users. The reference frame should be referred to as ETRF89 to distinguish it from other realizations of

ETRS89.

Anchor definition Coincides with ITRF89 at epoch 1989.0 and is fixed to the stable part

of the Eurasian tectonic plate through 3 rotation rates derived from the AM02 geophysical model, representing the Eurasian plate's angular

velocity about its Euler pole.

Release date 1990 Coordinate Reference Epoch 1989.0

Scope Spatial referencing

Ellipsoid GRS 1980
Prime Meridian Greenwich

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m*m*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

 Semi-major axis
 6378137.0 m

 Inverse flattening
