Item class GeodeticCRS

Name ITRF92 - XYZ

Item status VALID
Identifier 261

Alias International Terrestrial Reference Frame 1992

Alias IERS Terrestrial Reference Frame 1992

Information source Title No-net-rotation model of current plate velocities

incorporating plate motion model NUVEL-1

Author D.F. Argus, R.G. Gordon
Publisher American Geophysical Union

Publication date 1990-05-01

Edition date

Series/Journal name Geophysical Research Letters

Issue identification Volume 18, Issue 11

Information source Title ITRF 92 and its associated velocity field

Author C. Boucher, Z. Altamimi, L. Duhem

Publisher Central Bureau of IERS - Observatoire de Paris,

61 avenue de l'Observatoire, 75014 Paris, France

Publication date 1993-10-01

Edition date

Series/Journal name IERS Technical Notes

Issue identification 15.0 ISO Geodetic Registry

Remarks Replaces ITRF91 - XYZ. Replaced by ITRF93 - XYZ.

Scope Spatial referencing

Datum International Terrestrial Reference Frame 1992

Coordinate System Geocentric 3D right-handed Cartesian CS. Axes: Geocentric X,Y,Z.

Orientation: Z to North Pole, [X and Y in the equatorial plane, X at Prime Meridian | X in the equatorial plane at the Prime Meridian]. UoM:

m.

#### Extent

Remarks Replaces ITRF91. Replaced by ITRF93. This is a purely Cartesian

reference frame with no ellipsoid defined. GRS80 is the ellipsoid

recommended by the IAG and IERS.

Anchor definition Realisation of the IERS Terrestrial Reference System (ITRS) at

reference epoch 1988.0. Origin is defined by SLR. Scale is defined by SLR noting that the scales of most VLBI Solutions are consistent with SLR. Orientation is defined such that no global rotation exists with respect to ITRF91. In order to insure the condition of no-net-rotation of the ITRS orientation with respect to the Earth's crust, NNR-NUVEL1 was selected as the reference motion model as recommended by the IERS Conventions (1992) (McCarthy, 1992). Datum defined by a set of 3 dimensional Cartesian station coordinates and velocities given in the citations. The ITRF92 velocity field has been obtained by combination of eight site velocity fields estimated by SLR and VLBI analysis centers.

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m\*m\*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

 Semi-major axis
 6378137.0 m
