ISO Geodetic Registry

Item class Transformation

Name WGS 84 (G1762) to WGS 84 EGM2008 - OHt [2]

Item status VALID
Identifier 470

Information source Title EGM2008 - WGS 84 Version Author NGA Office of Geomatics

Publisher National Geospatial-Intelligence Agency

Revision date 2013-04-29

Edition date

Data source ISO Geodetic Registry

Remarks Transformation from WGS 84 (G1762) ellipsoidal heights to EGM2008

orthometric heights using the EMG2008 geoid grid with node spacing of 1 arc-minute. For a larger grid spacing (in principle less exact but requiring less computing resources) see WGS 84 G1762 To WGS 84

EGM2008 - OHt [1].

Operation version 2.0

Scope Spatial referencing

Operation accuracy 0.5 m

Source CRS WGS 84 (G1762) - LatLonEHt
Target CRS WGS 84 EGM2008 - OHt

Operation method Geographic3D to Gravity Related Height (EGM2008)

Extent

Description	World.	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Operation parameter values

Geoid (height correction) model file Ur	nd_min1x1_egm2008_isw=82_WGS84_TideFree.gz

Remarks This transformation involves the application of a geoid-ellipsoid

separation value interpolated from a geoid model. The model provides separation values at the nodes on a regular grid of latitude and longitude intersection points. The geodetic latitude and longitude used to interpolate within the grid are not affected by this transformation. The grid is referenced to a specific geographic CRS (the source CRS) and interpolation must be made in this system. Calculation of the separation is achieved through a spline interpolation developed for the EGM2008 grids, using the latitude and longitude of the point. This step provides the geoid-ellipsoid separation (N) above the ellipsoid of the source Geographic 3D CRS. The orthometeric height (H) is then computed from the ellipsoid height (h) in the source Geographic 3D CRS using: H = h - N Applies to EGM2008 model. For earlier model see Geographic3D to GravityRelatedHeight (EGM84) and Geographic3D to GravityRelatedHeight (EGM84).
