ISO Geodetic Registry

Item class Transformation

Name ITRF97 to ITRF2014 (IERS v1)

Item statusVALIDIdentifier578

Information source Title Transformation parameters from ITRF2014 to

past ITRFs

Author Institut National de l'Information Geographique et

Forestiere (IGN)

Publisher Institut National de l'Information Geographique et

Forestiere (IGN), Laboratoire de Recherche en

Geodesie (LAREG)

Publication date 2018
Other citation details Website

Data source ISO Geodetic Registry

Remarks The IERS citation describes the ITRF2014 to ITRF97 transformation.

Accuracy of transformation is given at the reference epoch for the transformation parameters. Accuracy at other epochs depends on the accuracies of the parameters at the reference epoch and their rates of change. Refer to citations for accuracies of the parameters and their

rates of change.

Operation version IERS v1

Scope Spatial referencing

Operation accuracy 0.001 m

Source CRS ITRF97 - XYZ

Target CRS ITRF2014 - XYZ

Operation method Time-Dependent Position Vector Transformation (geocentric Cartesian

domain)

Extent

| Description | World. | |
|-------------------------|----------------------|--------|
| Geographic Bounding Box | West-bound longitude | -180.0 |
| | North-bound latitude | 90.0 |
| | East-bound longitude | 180.0 |
| | South-bound latitude | -90.0 |

Operation parameter values

| Time reference | 2010.0 year |
|--------------------------------------|----------------------------------|
| Rate of change of scale difference | -0.12 parts per billion per year |
| Rate of change of Z-axis rotation | -0.02 milliarc-second per year |
| Rate of change of Y-axis rotation | 0.0 milliarc-second per year |
| Rate of change of X-axis rotation | 0.0 milliarc-second per year |
| Rate of change of Z-axis translation | 3.3 millimetre per year |
| Rate of change of Y-axis translation | 0.5 millimetre per year |
| Rate of change of X-axis translation | -0.1 millimetre per year |
| Scale difference | -3.8 parts per billion |
| Z-axis rotation | -0.26 milliarc-second |
| Y-axis rotation | 0.0 milliarc-second |
| X-axis rotation | 0.0 milliarc-second |

| Z-axis translation | 62.8 millimetre |
|--------------------|-----------------|
| Y-axis translation | 0.5 millimetre |
| X-axis translation | -7.4 millimetre |

Remarks Note the analogy with the rotation for the Time-dependent Coordinate

Frame Transformation but beware of the differences! The Position

Vector Transformation convention is used by IAG.
