Remarks NEW REMARK NGA zone names using postitive zone numbers

for northern hemisphere and negative zone numbers for southern hemisphere are specified as alias name. QUESTION Conversions are supposed to be errorless with a single unique definition. Are these "conversions" really errorless and is there really only one definition

(formula)?

Scope Spatial referencing

Operation method Transverse Mercator Projection

Extent

World - onshore and offshore - between 180°W and 174°W, northern hemisphere between equator and 84°N.

Geographic Bounding Box

West-bound longitude round 180.0
North-bound latitude 84.0
