Remarks Replaces World Geodetic System 1984 (G1674) and used in broadcast

and precise ephemerides from 2013-10-16. The reference frame was redesignated WGS 84 (G1762') after coordinates of 7 NGA tracking stations were changed following station moves and antenna updates between 2014-08 and 2015-06. Replaced by WGS 84 (G2139) from

2021-01-03.

Anchor definition Defined through coordinates of 19 GPS tracking stations adjusted to

a subset of IGb08 stations at epoch 2005.0 using observations made in May 2013. The IGb08 station coordinates are considered to be

equivalent to ITRF2008.

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m
