Replaces World Geodetic System 1984 (G730) from 1997-01-29. Remarks

> Replaced by World Geodetic System 1984 (G1150) from 2002-01-20. Used in broadcast ephemeris from 1997-01-29 to 2002-01-19 and in

precise ephemeris from 1996-09-29 to 2002-01-19.

Anchor definition Defined through coordinates of 13 GPS tracking stations adjusted to

> a subset of ITRF94 stations at epoch 1997.0. The reference epoch for the adjustment was 1994.0 and the station coordinates were propagated to 1997.0 using the NNR-NUVEL-1A plate motion model.

1997-01-29

Coordinate Reference Epoch 1997.0

Scope Spatial Referencing and GPS satellite navigation

Ellipsoid WGS 84
Prime Meridian Greenwich

Extent

Description	World.	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m
