Remarks CGVD2013 heights at epoch 1997.0.

Scope Spatial referencing.

Datum Canadian Geodetic Vertical Datum of 2013 (Canadian Gravimetric

Geoid of 2013a) Epoch 1997

Coordinate System Vertical CS. Axis: height (H). Orientation: up. UoM: m.

Extent

Description Canada - onshore and offshore - Alberta,
British Columbia, Manitoba, New Brunswick,

Newfoundland and Labrador, Northwest Territories, Nova Scotia, Nunavut, Ontario,

	Prince Edward Island, Quebec, Saskatchewan, Yukon.	
Geographic Bounding Box	West-bound longitude	-141.01
	North-bound latitude	90.0
	East-bound longitude	-47.74
	South-bound latitude	40.04

ISO Geodetic Registry Data source

Remarks Heights are at epoch 1997.0.

Anchor definition CGVD2013(CGG2013a) is a gravimetric datum defined by the

> Canadian Gravimetric Geoid of 2013a (CGG2013a), referenced to the NAD83(CSRS) v6 geodetic datum. The geoid-based datum is defined by the equipotential surface Wo=62,636,856.0 m*m/s/s, representing by convention the coastal mean sea level for North America. The definition and geopotential value comes from an agreement between Canada and the USA. The Canadian Gravimetric Geoid of 2013a (CGG2013a) is the second realization of the CGVD2013 vertical datum

and is considered static. It is available in both the NAD83(CSRS) and ITRF2008 geometric reference frames using the GRS80 ellipsoid, making it compatible with space-based positioning techniques. Heights in CGVD2013(CGG2013a) epoch 1997.0 are orthometric and can be obtained from NAD83(CSRS) v6 or ITRF2008 ellipsoidal heights at epoch 1997.0 by subtracting the CGG2013a geoid height in either NAD83(CSRS) v6 or ITRF2008, respectively.
