Publication date 1991-09-01

Edition Second Edition

Edition date 1991-09-01

Series/Journal name Technical Report

Issue identification TR8350.2

Data source ISO Geodetic Registry

Remarks Replaced by WGS 84 (G730) 1994-01-02.

Anchor definition The origin, scale and orientation of WGS 84 are nominally defined

to be that for the BIH Terrestrial System 1984 (BTS84) with origin at the geocentre. Stations in the Doppler reference frame NWL 9D were brought into alignment with BTS 84 using an internationally adopted

transformation.

Release date 1987-01-01

Scope Spatial Referencing and GPS satellite navigation

Ellipsoid WGS 84
Prime Meridian Greenwich

## Extent

Description

World.

Geographic Bounding Box

North-bound latitude
East-bound longitude
South-bound latitude
90.0
180.0
-90.0

Remarks The World Geodetic System 1984 (WGS 84) contains four defining

physical parameters for the Earth: the semi-major axis (a), the reciprocal of flattening (1/f) of an oblate spheroid of revolution, the geocentric gravitational constant (GM = 3.986004418e14 m^3/s^2) includes the mass of the atmosphere, and the Earth's angular rotational

velocity about its spin axis (omega = 7.2921150e-5 rad/s).

Semi-major axis 6378137.0 m

Inverse flattening 298.2572236 m
