Data source ISO Geodetic Registry
Scope Spatial referencing

Datum North American Datum of 1983 (CSRS) version 8

Coordinate System Geocentric 3D right-handed Cartesian CS. Axes: Geocentric X,Y,Z.

Orientation: Z to North Pole, [X and Y in the equatorial plane, X at Prime Meridian | X in the equatorial plane at the Prime Meridian]. UoM:

m.

Extent

Canada - onshore and offshore - Alberta,
British Columbia, Manitoba, New Brunswick,
Newfoundland and Labrador, Northwest
Territories, Nova Scotia, Nunavut, Ontario,
Prince Edward Island, Quebec, Saskatchewan,
Yukon.

Geographic Bounding Box West-bound longitude -141.01

North-bound latitude 90.0

East-bound longitude South-bound latitude

-47.74 40.04

Remarks Adopted by the Canadian federal government for Canada. Replaces

NAD83(CSRS) v7.

Anchor definition Realization of the North American Datum of 1983 for the Canadian

Spatial Reference System, referred to as CSRS98 or CSRS. The frame is defined by a time-dependent seven parameter transformation of ITRF2020 3D geocentric Cartesian coordinates and velocities for Canadian and bordering US and Greenland areas at reference epoch 2010.0. The frame is kept aligned to North America at other epochs using the NNR-NUVEL-1A estimate of three Cartesian rotation rates of change representing the tectonic plate motion of North America. The origin, scale and orientation of the frame are nominally defined to be

that for the BIH Terrestrial System 1984 (BTS84).

Release date 2022-11-27
Coordinate Reference Epoch 2010.0

Scope Spatial referencing

Ellipsoid GRS 1980
Prime Meridian Greenwich

Extent

Description Canada - onshore and offshore British Columbia, Manitoba, None Newfoundland and Labrador, I Territories, Nova Scotia, Nuna Prince Edward Island, Quebec Yukon.	
West-bound longitude	-141.01 90.0
East-bound longitude	-47.74 40.04
	British Columbia, Manite Newfoundland and Labr Territories, Nova Scotia Prince Edward Island, Q Yukon. West-bound longitude North-bound latitude

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m*m*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

Semi-major axis 6378137.0 m
Inverse flattening 298.257222101 m
