ISO Geodetic Registry

Item class Transformation

NZGD2000 to NZVD2009 - NOHt [LINZ]

Item status VALID
Identifier 681

Alias NZGeoid2009

Information source Title Standard for New Zealand Vertical Datum 2009

Author Office of the Surveyor General Publisher Land Information New Zealand

Publication date 2009-09-14

Edition date

Issue identification LINZS25004

Data source ISO Geodetic Registry

Remarks Grid transformation using quasigeoid model New Zealand Quasigeoid

2009 (NZGeoid2009).

Operation version LINZ

Scope Spatial referencing.

Operation accuracy 0.06 m

Source CRS NZGD2000 - LatLonEHt Target CRS NZVD2009 - NOHt

Operation method Geographic3D to Gravity Related Height (NZgeoid)

Extent

Description	New Zealand - onshore and offshore - Antipodes Islands, Auckland Islands, Bounty Islands, Campbell Island Chatham Islands, Kermadec Islands, North Island, Raoul Island,	
	Snares Islands, South I	sland, Stewart Island.
Geographic Bounding Box	West-bound longitude	160.0
	North-bound latitude	-25.0
	East-bound longitude	-170.0
	South-bound latitude	-60.0

Operation parameter values

Geold (Neight Correction) Model file Mzgeoldos.sid	Geoid (height correction) model file	nzgeoid09.sid

Remarks This transformation involves the application of a geoid-ellipsoid

separation value interpolated from a quasi-geoid model. The model provides separation values at the nodes on a regular grid of latitude and longitude intersection points. The geodetic latitude and longitude used to interpolate within the grid are not affected by this transformation. The grid is referenced to a specific geographic CRS (the source CRS) and interpolation must be made in this system. Calculation of the separation is achieved through a bi-linear interpolation of the grid, using the latitude and longitude of the point. This step provides the geoid-ellipsoid separation (N) above the ellipsoid of the source Geographic 3D CRS. The normal orthometric height (H) in the target vertical CRS is then determined from: H = h - N where h = the height above the ellipsoid in the source geographic 3D CRS.
