Item class GeodeticCRS

Name ITRF2020 - XYZ

Item statusVALIDIdentifier802

Alias International Terrestrial Reference Frame 2020

Alias IERS Terrestrial Reference Frame 2020

Information source Title ITRF2020

Author International Earth Rotation and Reference

Systems Service (IERS)

Publisher Institut National de l'Information Geographique et

Forestiere (IGN)

Revision date 2022-04-15

Other citation details Webpage: https://itrf.ign.fr/en/solutions/itrf2020

(accessed 2022-04-18)

Information source Title ITRF2020 is available on line

Author Z. Altamimi

Publisher International Earth Rotation and Reference

Systems Service (IERS)

Publication date 2022-04-19 Series/Journal name IERS Message

Issue identification 456

Other citation details https://datacenter.iers.org/data/2/

message_456.txt (accessed 2022-04-19)

Data source ISO Geodetic Registry

Remarks Replaces ITRF2014 - XYZ.

Scope Spatial referencing

Datum International Terrestrial Reference Frame 2020

Coordinate System Geocentric 3D right-handed Cartesian CS. Axes: Geocentric X,Y,Z.

Orientation: Z to North Pole, [X and Y in the equatorial plane, X at Prime Meridian \mid X in the equatorial plane at the Prime Meridian]. UoM:

m.

Extent

Description	World	
Geographic Bounding Box	West-bound longitude	-180.0
	North-bound latitude	90.0
	East-bound longitude	180.0
	South-bound latitude	-90.0

Item class GeodeticDatum

Remarks Replaces ITRF2014. This is a purely Cartesian reference frame with no

ellipsoid defined. GRS80 is the ellipsoid recommended by the IAG and

IERS.

Anchor definition Realisation of the IERS Terrestrial Reference System (ITRS) at

reference epoch 2015.0. Origin of the long-term frame is defined using the concept of internal constraints such that there are zero translation parameters at epoch 2015.0 and zero translation rates between the ITRF2020 and the ILRS SLR long-term frame over the time-span 1993.0-2021.0. Scale of the long-term frame is defined using the concept of internal constraints such that there are zero scale and scale rate between ITRF2020 and the scale and scale rate averages of VLBI selected sessions up to 2013.75 and SLR weekly solutions covering the time-span 1997.7-2021.0. Orientation is defined such that there are zero rotation parameters at epoch 2015.0 and zero rotation rates between the ITRF2020 and ITRF2014. The datum is defined by a set of 3 dimensional Cartesian station coordinates, velocities, annual and semi-annual seasonal terms, and post-seismic deformation models

given by the citations.

Release date 2022-04-15 Coordinate Reference Epoch 2015.0

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m*m*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

Semi-major axis 6378137.0 m
Inverse flattening 298.257222101 m
