Remarks Replaces NAD83(MARP00) for control determined in an active

reference frame and NAD83 (FBN) for passive control.

Anchor definition Realization of NAD83. The frame is defined by a seven parameter

transformation of ITRF2008 3D geocentric Cartesian coordinates and velocities for the Guam and the Commonwealth of the Northern Mariana Islands (CNMI) at reference epoch 2010.0. The frame is kept aligned to the Mariana tectonic plate using an Euler pole rotation. The origin, scale and orientation of the frame are nominally defined

to be that for the BIH Terrestrial System 1984 (BTS84). This also is a realization of passive control constrained to the values at the CORS. NAD83(20110 serves as a connection between passive network transformed by grids and active frames defined by time-dependent

transformations.
