vertical-working-surface (accessed 2021-09-27)

Data source ISO Geodetic Registry

Remarks AGQG is used to realise the AVWS datum. Uncertainties (4-8 cm

> across mainland Australia) are given in the accompanying grid file AGQG_uncertainty_20191107.gsb. This version of the AGQG model contains a systematic bias of ~0.91 m due to an error in information from suppliers of the global model used in its creation. This AGQG

> model has been replaced with version GAv2 called AGQG_20201120.

Operation version GA v1

Scope Spatial referencing

 $0.1 \, m$ Operation accuracy

Source CRS GDA2020 - LatLonEHt

Target CRS AVWS - NHt

Operation method Geographic3D to GravityRelatedHeight (AUSGeoid v2)

Extent

Description Australia including Lord Howe Island,

Macquarie Island, Ashmore and Cartier Islands, Christmas Island, Cocos (Keeling) Islands, Norfolk Island, All onshore and offshore.

Geographic Bounding Box	West-bound longitude	93.41
	North-bound latitude	-8.47
	East-bound longitude	173.34
	South-bound latitude	-60.56

Operation parameter values

Geoid (height correction) model file	AGQG_20191107.gsb

Item class OperationMethod

Name Geographic3D to GravityRelatedHeight

(AUSGeoid v2)

Item statusVALIDIdentifier83

Alias AUSGeoid09

Data source ISO Geodetic Registry

Remarks The Information Source references software which offers both bi-cubic

and bi-linear interpolation methods. Unlike earlier Australian models which used bi-linear interpolation, AUSGeoid09 uses the bi-cubic

method. See Info Source for file format doc.

Formula The AUSGeoid09 model of the Australian Height Datum
