Remarks Replaces NAD83(CORS96) Epoch 2002.0 for control determined in an

active reference frame and NAD83 (2007) for passive control.

Anchor definition Realization of NAD83. The frame is defined by a time-dependent

seven parameter transformation of ITRF2008 3D geocentric Cartesian

coordinates and velocities for the Conterminous United States

(CONUS), including Alaska, Puerto Rico and the U.S. Virgin Islands at

reference epoch 2010.0. The frame is kept aligned to North America at other epochs using the NNR-NUVEL-1A estimate of three Cartesian

rotation rates of change representing the tectonic plate motion of North America. The origin, scale and orientation of the frame are nominally defined to be that for the BIH Terrestrial System 1984 (BTS84). This also is a realization of passive control constrained to the values at the CORS. NAD83(20110 serves as a connection between passive network transformed by grids and active frames defined by time-dependent transformations.
