ISO Geodetic Registry

Item class OperationMethod

Name Geographic3D to Gravity Related Height

(KNGeoid14)

Item statusVALIDIdentifier1001

Data source ISO Geodetic Registry

Remarks A vertical transformation model between KGD2002 ellipsoid height

and KVD1964 normal orthometric height. This transformation model is a hybrid geoid model covering the territory of the Republic of Korea. This model provides separation values on a regular grid of latitude and

longitude intersection points. Replaced by KNGeoid18.
