Remarks Adopted by the Canadian federal government for use in Canada, and

by provincial governments in Alberta, British Columbia, Manitoba,

Anchor definition Release date	New Brunswick, Prince Edward Island, Quebec and Saskatchewan. Replaces NAD83(CSRS96) v1. Replaced by NAD83(CSRS) v3. Realization of the North American Datum of 1983 for the second version of the Canadian Spatial Reference System, referred to as CSRS98 or CSRS. The frame is defined by a seven parameter transformation of ITRF96 3D geocentric Cartesian coordinates and velocities for Canadian and bordering U.S. and Greenland stations at reference epoch 1997.0. The frame is kept aligned to North America at other epochs using the NNR-NUVEL-1A estimate of three Cartesian rotation rates of change representing the tectonic plate motion of North America. The origin, scale and orientation of the frame are nominally defined to be that for the BIH Terrestrial System 1984 (BTS84). 1998-01-01
Scope	Spatial referencing
Ellipsoid	GRS 1980
Prime Meridian	Greenwich

Extent

Description	Canada - onshore and offshore - Alberta, British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Northwest Territories, Nova Scotia, Nunavut, Ontario, Prince Edward Island, Quebec, Saskatchewan, Yukon.	
Geographic Bounding Box	West-bound longitude	-141.01
	North-bound latitude	90.0
	East-bound longitude	-47.74
	South-bound latitude	40.04

Remarks Adopted by IUGG 1979 Canberra. Inverse flattening is derived from

geocentric gravitational constant GM = 3986005e8 m*m*m/s/s, dynamic form factor J2 = 108263e-8 and Earth's angular velocity =

7292115e-11 rad/s.

Semi-major axis 6378137.0 m
Inverse flattening 298.257222101 m
