ISO Geodetic Registry

Item class	OperationMethod
Name	**Geographic3D to Gravity Related Height (KNGeoid14)**
Item status	VALID
Identifier	1001
Data source	ISO Geodetic Registry
Remarks	A vertical transformation model between KGD2002 ellipsoid height and KVD1964 normal orthometric height. This transformation model is a hybrid geoid model covering the territory of the Republic of Korea. This model provides separation values on a regular grid of latitude and longitude intersection points. Replaced by KNGeoid18.

Operation parameters

Geoid (height correction) model file
