Item class	OperationMethod
Name	**Geocentric Translation (geocentric Cartesian domain)**
Item status	VALID
Identifier	75
Alias	Translation
Alias	Frame translation
Alias	Geocentric translation
Alias	Coordinate translation
Data source	ISO Geodetic Registry
Remarks	This method allows calculation of geocentric Cartesian coordinates in the target system by adding the parameter values to the corresponding coordinates in the source system. See geographic 3D and 2D variants of this method for transformations of other CRS types.

Operation parameters

X-axis translation
Y-axis translation
Z-axis translation
